

RNA22 v2 results

Results have been computed and are shown below. If there are no results shown, it means your chosen parameters yielded no results.

Note: The p-value represents the likelihood that the target site loci is random. That is, a lower p-value represents a greater chance that the loci contains a valid MRE

miR Name	transcript name	leftmost position of predicted target site	folding energy (in -Kcal/mol)	heteroduplex	p value
